TO WHOM IT MAY CONCERN

SCRAP UTILISED BY EVRAZ HIGHVELD STEEL AND VANADIUM LIMITED

We hereby confirm that Evraz Highveld Steel and Vanadium Limited is an integrated steel manufacturer

The ore is sourced from Mapochs mine which is approximately 140km from the Steel Works.

The molten metal used for steel production is made up of virgin iron units from our Iron Plant and scrap additions in our Shaking Ladles and Basic Oxygen furnaces. During normal production approximately 80% of the molten metal comes from the Iron Plant and approximately 20% from scrap additions, which is generated internally.

The Steel works is approximately 120 km from Johannesburg where the majority of our local customers are located.
